

Suggestions

1. Ensuring Data Consistency During Assessment Deletion:

- When deleting an assessment, it's important to note that while the associated answers are removed from the database, they may still reside in Firebase Storage. To address this, consider implementing a loop to systematically delete associated files in Firebase Storage, ensuring data consistency.

2. Managing Unreported Teacher Leave:

- In cases where a teacher takes leave without formally requesting it, the absence is currently recorded only in Teacher Attendances, without affecting their leave quota. To improve this process, consider automatically assigning a leave type or, alternatively, prompting the teacher to specify the type of leave. This adjustment ensures accurate leave tracking.

3. Enhancing Payment Confirmation Authenticity:

- Currently, the "Payment Successful" status is updated solely in the database. To enhance transparency and authenticity, consider offering users a downloadable payment confirmation file. This file can serve as tangible proof of payment, providing users with additional assurance regarding their financial transactions.
